If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

Brief Description of the Drawings

Please amend the originally filed specification to insert at page 5, between lines 21 and 22 the following heading:

Detailed Description of the Embodiments - -

Claims 1-3 have been amended to - -

1. (Currently Amended) A combustion system for a gas turbine comprising:

    a premixing chamber for air which is mixed with the fuel injected from a series of holes creating a main central flame which is formed in a flame tube, said premixing chamber is convergent towards a connection end with a combustion chamber comprising the flame tube; and

the flame tube being connected to the premixing chamber through a tapered portion, the tapered portion having a series of holes positioned along a circumference of the tapered portion coaxial with a longitudinal axis of the flame tube;

a series of pilot devices distributed in the series of holes of the tapered portion and configured to premix the fuel gas prior to injecting the fuel gas into the combustion chamber and create a series of corresponding pilot flames suitable for stabilizing configured to stabilize the main central flame itself, at the same time reducing the polluting emissions; and

each of the series of pilot devices includes a sub-pilot device configured to inject pilot fuel gas into the respective pilot device prior to mixing the pilot fuel gas and produce diffusion flames for stabilizing the pilot flame.

2. (Currently Amended) The combustion system with low polluting emissions according to claim 1, wherein said flame tube comprises a tapered connection end to the air premixing chamber and in that said tapered end comprises a series of holes each hole of the series of holes in the tapered portion houses housing a respective pilot device of the series of fuel gas premixing pilot devices.

3. (Currently Amended) The combustion system with low polluting emissions according to claim 1, wherein the holes of the series of holes in the tapered portion are positioned at an equal distance along a the circumference of the tapered portion end of the flame tube coaxial with its axis. - -

***Allowable Subject Matter***

3. Claims 1-15 and 18 are allowed.

4. The following is an examiner's statement of reasons for allowance: The closest prior art Bonciani (US Patent No. 5,660,044) which is currently assigned to the same assignee discloses a premixing chamber 2 (fig. 1) for air which is mixed with fuel injected from a series of holes 15 (fig. 1) creating a main central flame which is formed in a flame tube 8' (fig. 1), said premixing chamber is convergent towards a connection end 11 (fig. 1) with a combustion chamber 4 (fig. 1) comprising the flame tube; the flame tube being connected to the premixing chamber through a tapered portion 11 (fig. 1), the tapered portion having a series of holes (fig. 1) positioned along a circumference (fig. 1) of the tapered portion coaxial with a longitudinal axis of the flame tube; a series of pilot devices 27 (fig. 1) distributed in the series of holes of the tapered portion 11 (fig. 1) and configured to premix fuel gas (fig. 1) prior to injecting the fuel gas into the combustion chamber and create a series of corresponding pilot flames configured to stabilize the main central flame, at the same time reducing the polluting emissions.

However, Bonciani does not disclose or render obvious of each of the series of pilot devices includes a sub-pilot device configured to inject pilot fuel gas into the respective pilot device prior to mixing the pilot fuel gas and produce diffusion flames for stabilizing the pilot flame.

Note that the term "produce diffusion flames" was defined by the specification in paragraph [0012] to be "As this pilot fuel has not been previously mixed with comburent air, it burns in flames mainly controlled by the diffusion process of the fuel in the comburent air, which are consequently called diffusion flames", therefore, the diffusion flames can be produced only without pre-mixing the fuel.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
